Our idea behind this project would be to provide a platform to connect people who are in need of temporary space with people who have unused space in their apartments or houses. This would enable people to use their free space in their houses to earn some side income and provide people with less space to temporarily store things at affordable prices.

Core Features:

1. **Landing Page:** Would offer details about the service and the motivation behind it
Guests would be able to view all the current listings available
2. **User profile page:** Allows a user to post their listings
 - a. Add listing
 - b. Delete listing
 - c. Modify listing
 - d. Mentions the ratings of the user/space rented
3. **All Listings page:** Here the user can see different postings in his city, if the posts have pictures of space he can see it, and the volume of space and price. A filter will also be provided. Once the user selects any post he will go to Post details page directed after search page where in user could view all the listings

User would have the ability to filter listings based on :

- a. Name
- b. Size
- c. Price

d. Location

4. **Posts Detail:** On this page, the user will get all the information about that particular Post. The price of the post, contact number of the owner, reviews about that post, the data available, etc. And he will also get an option to book it. The owner of the Storage has the option to select any one of the bookings made.
- a. Reviews of the listing
 - b. Contact owner
 - c. Save listing
 - d. Share listing
 - e. Ratings of the owner

Extra features

- 1. Chat app between users
- 2. Map showing all the listings available to you
- 3. Admin/moderator that can remove posts
- 4. Ad Banners
